	STFC IRIS Directors: Jon Hays and Andrew Samsun	The Resource Scrutiny and Allocation Panel Chair: Daniela Bauer

Re: Notice of Allocation of IRIS Resources for 2022/2023: GAIA

Thank you for submitting an IRIS resource request for 2022/2023. The RSAP met on 4th March to consider all requests. The outcome of your request is summarized in the table below.

Project:	CPU (cores)	GPU cards	Disk	Tape
Requested	1860 (varying memory requirements)	-	3544 TB	400 TB
Recommendation	1860	-	As requested, but storage to be awarded gradually.	

General guidance:

In a small number of cases a provisional allocation partially meeting the request has been made. This follows RSAP policy to make partial allocations for new activities or where activities have not been able to make full use of previous allocations. The full allocation (indicated in brackets) will be available once effective use of the provisional allocation is demonstrated.

IRIS tries to fulfil all recommendations, however due to budget limitations might not be able to. In this case you will be contacted by the Science Director to discuss further strategy.

All projects in receipt of an IRIS allocation are responsible for monitoring their usage. Effective use of allocated resources can be used by the panel when making decisions about future allocations.

While IRIS does not have funds to provide for computing support, if you have problems accessing or making effective use of the resources you are nevertheless strongly advised to contact the technical working group (IRIS-TWG@jiscmail.ac.uk) and/or your IRIS-DB representative.

In a number of cases the Panel felt that the computing model did not provide sufficient detail to verify on how the size of the request was determined. The guidance on this is likely to be amended for future requests.
